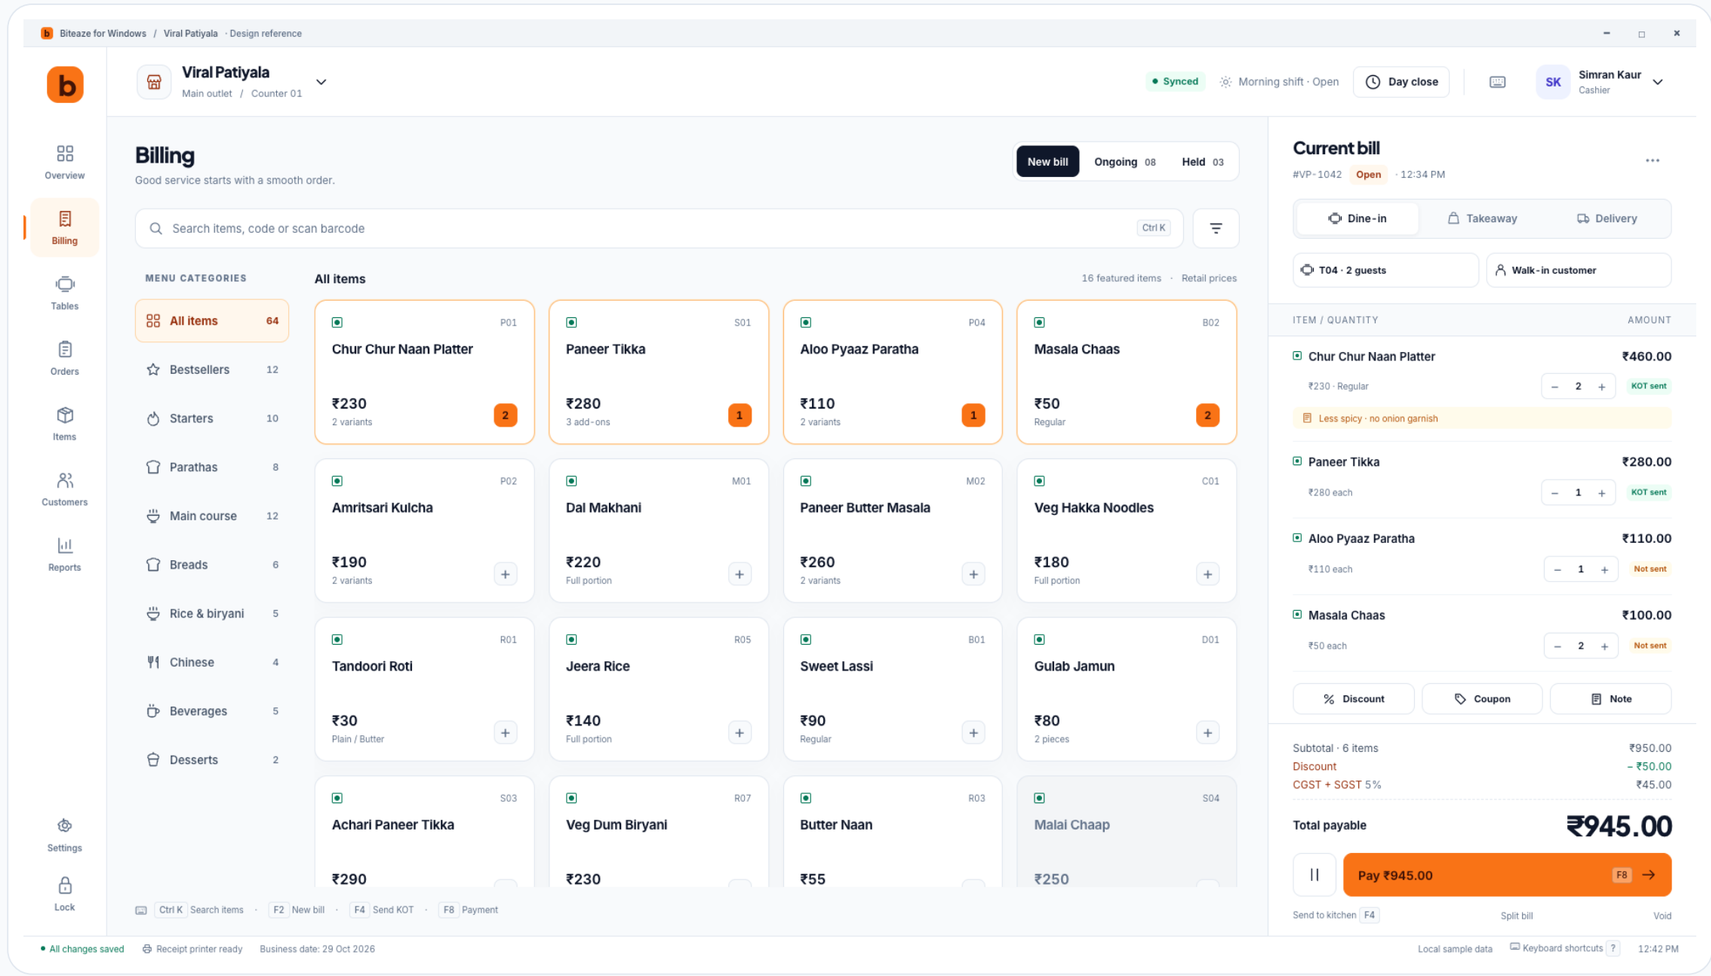
One clear workspace. Every billing moment.

A systematic desktop interface for the restaurant counter.

72 screen states

03 effective viewport sizes

01 shared component language



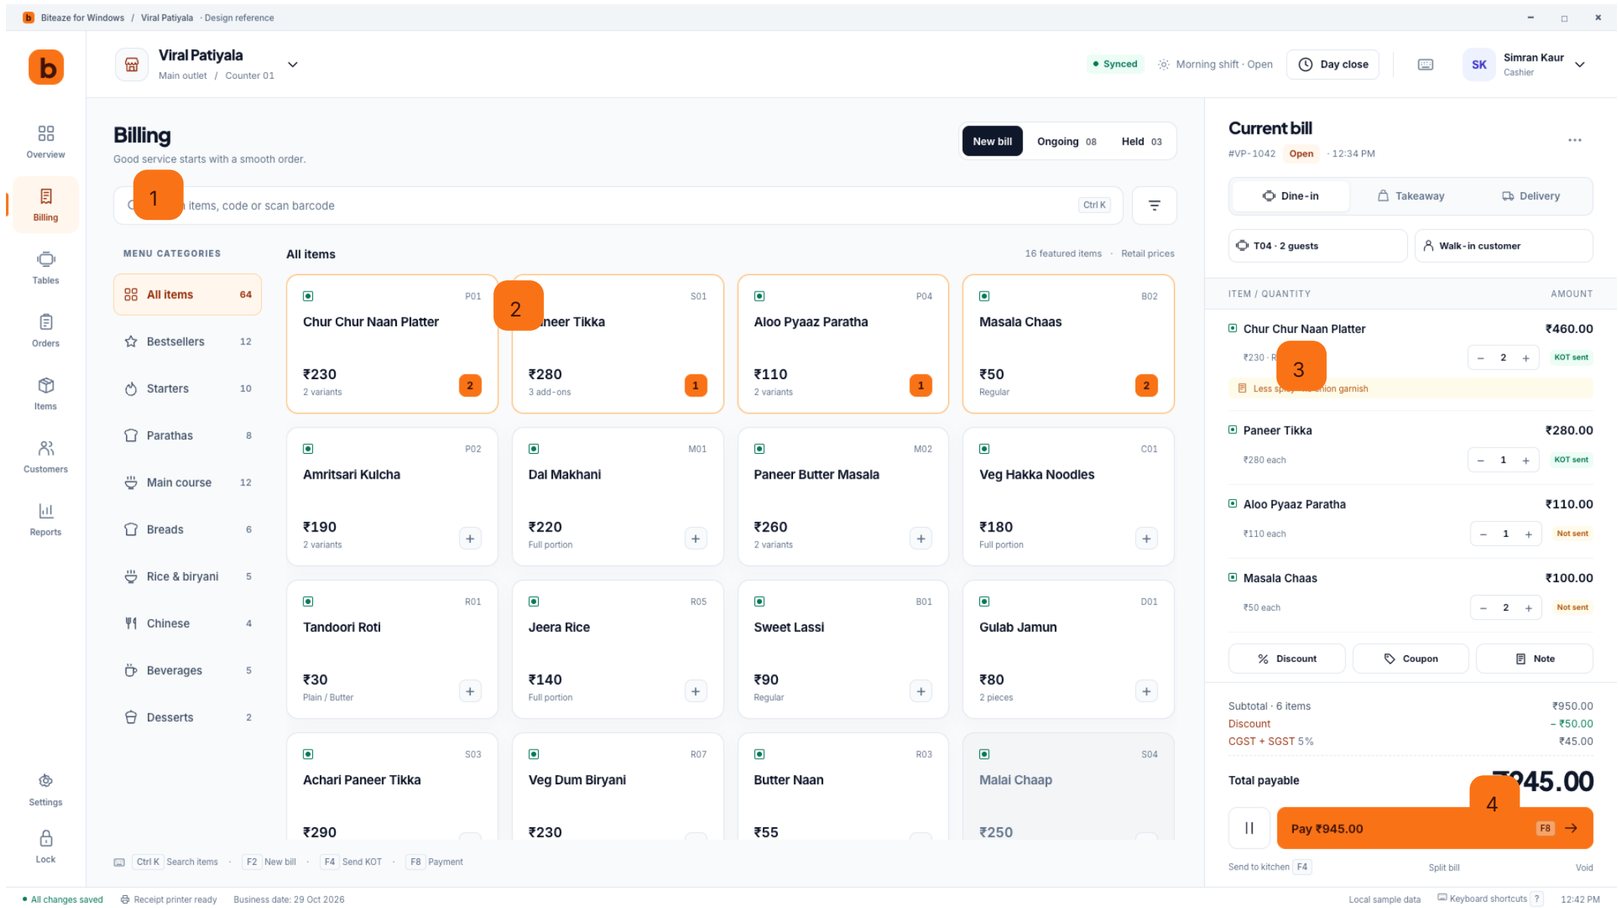
1920 × 1080 primary · 1366 × 768 compact · 1280 × 720 scaling check

Viral Patiyala sample outlet

Source-informed redesign. Proposed screens and demo behavior are identified throughout.

A stable layout for a busy counter

The cashier always knows where to find items, the active order and the next action.



A large-screen layout should use the available width intentionally. At compact sizes, categories move above the grid and spacing tightens; the checkout position remains stable.

1 Persistent navigation

Labelled rail and outlet/staff context. Operational modules stay in the same place.

2 Fast item selection

Search, categories and text-first tiles. Prices and options are readable without product photography.

3 One active bill

Service, customer, quantities and kitchen status stay together. Bill items scroll within this panel.

4 Checkout stays visible

The total and payment action are anchored below the item scroller, including on smaller windows.

One component language

Use the bundled tokens and stylesheet as the precise visual reference.

Type & rhythm

Billing workspace

Inter for controls, content and numbers

₹945.00

4px spacing rhythm · 10px control radius · 14–16px panels · 20px dialogs. Dark text on bright orange keeps the primary action legible.

Input density

44px default actions; 48–50px checkout. Compact secondary controls need enlargement for a touch-first deployment.

Desktop dimensions

1920 × 1080	96px rail	492px bill	4 item columns
1366 × 768	80px rail	404px bill	3 item columns
1280 × 720	72px rail	380px bill	3 item columns

Dialog widths: 540 / 640 / 860px. Payment: 1040px, or 980px at short heights. Right drawer: 580px, compact 540px. Headers and footers remain outside scrolling bodies.

Status has a name

Pair color with “KOT sent”, “Pending”, “Paid” and other explicit labels. Pending payment is never rendered as success.

Screen index

Click a row to jump to its full-screen design. Screens retain their numbers in the HTML explorer and PNG names.

How to use this reference

Visual structure is ready to reference. Business and device behavior must be bound to the application’s real state.

Translate the system, then bind the behavior

01 Shell and reusable controls

Build navigation, panels, fields, bill rows, totals and dialogs before individual pages.

02 Core order and payment flows

Keep modifier state, KOT changes, discounts, split bills and split tender explicit. Preserve the active bill when navigating.

03 Recovery and permissions

Pending, failed and successful payments have separate screens. A failed receipt print does not reverse a paid bill. Approvals stay scoped.

04 Native acceptance

Check actual Windows scaling, keyboard focus, Narrator, scanner input, printers, offline recovery and provider callbacks.

Research that informed the design

Petpooja ↗

Restaurant billing, KOT and operator controls.

Square ↗

Table and floor-plan organization.

Lightspeed ↗

Splitting and merging orders.

Microsoft ↗

Effective pixels and adaptive Windows layouts.

Measured for this delivery

216 browser layout measurements: 72 states × 3 sizes. No measured horizontal overflow, off-screen dialog footer or script error. 29 representative prototype interaction checks passed.

No production integration, native Windows hardware, accessibility-conformance or physical printer claim is made by those checks. Full detail and the 33-page source mapping are in the implementation guide.

Scope and provenance

The supplied tablet PDF informs theme, modules and terminology. It does not show core item-entry or payment screens; these are proposals. This kit includes synthetic data and a concept “b” mark. Replace it with approved assets before shipping. The live Windows codebase was not modified.
